

RE: NAB petition 04-160

I am writing in support of the rejection of this petition by the National Association of Broadcasters. As a satellite radio subscriber I have chosen to pay for services not available on the traditional broadcast band. I believe it should be my choice as to what services I will listen to, including traffic and weather. The inclusion of traffic and weather by satellite radio providers has no effect on the traditional broadcasters, and should continue.

Please reject this petition. There are many more important issues the FCC can deal with with traditional broadcast stations, including questionable broadcast practices and obscene programming.

I am one of the first subscribers to satellite radio because if offered services not available elsewhere. Leave it alone.
